Arrangements

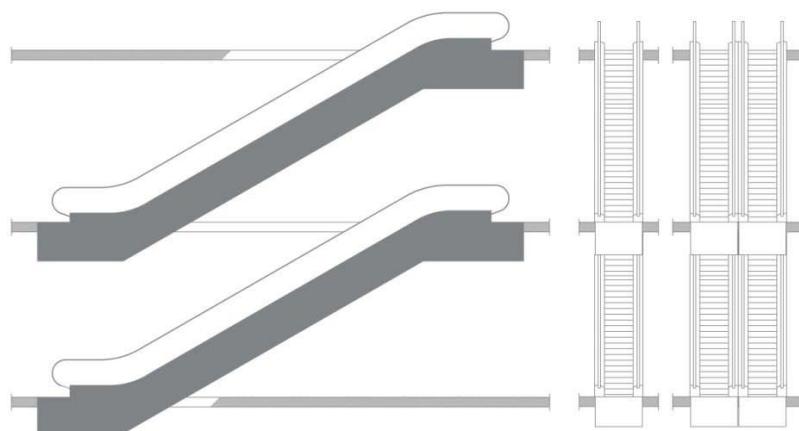

Single Unit

The single unit is used to link two levels. It is suitable for buildings with passenger traffic flowing mainly in one direction. Flexible adjustment to traffic flow is possible.

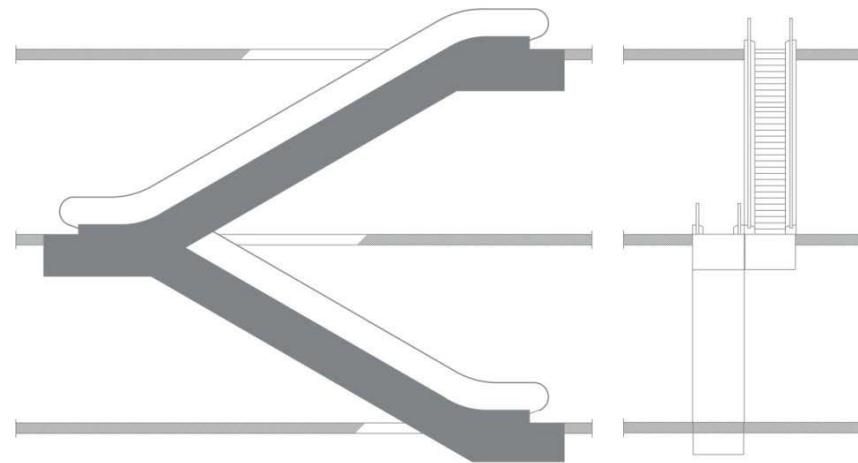

Interrupted & Parallel (one & two-way traffic)

The interrupted arrangement is somewhat inconvenient for users, but advantageous for department store owners. The parallel interrupted arrangement is used mainly in department stores and public transport buildings with a heavy traffic volume. When there are three or more escalators, it should be possible to reverse the traveling direction according to the traffic flow. This arrangement is economical, since no inner lateral claddings are required.

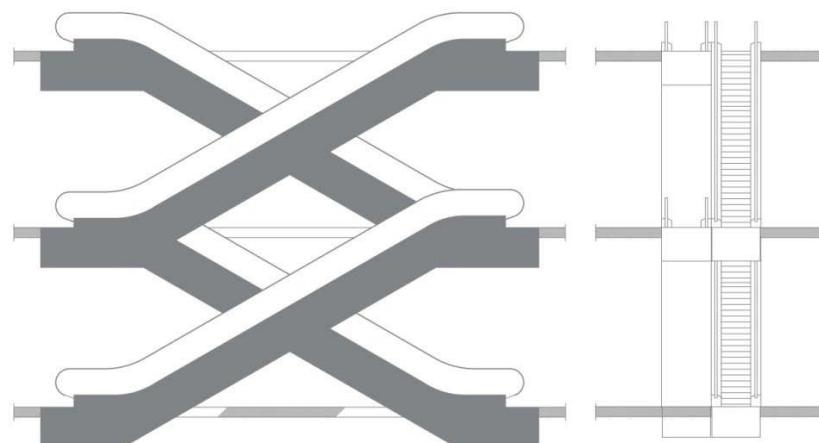

Continuous (one-way traffic)

The continuous arrangement is used mainly in smaller department stores to link three sales levels. It requires more space than the interrupted arrangement.

**Crisscross , Continuous (two-way traffic)**

The crisscross continuous arrangement is used mainly in major department stores, public buildings and public transport buildings where transport times between several levels should be kept to a minimum.

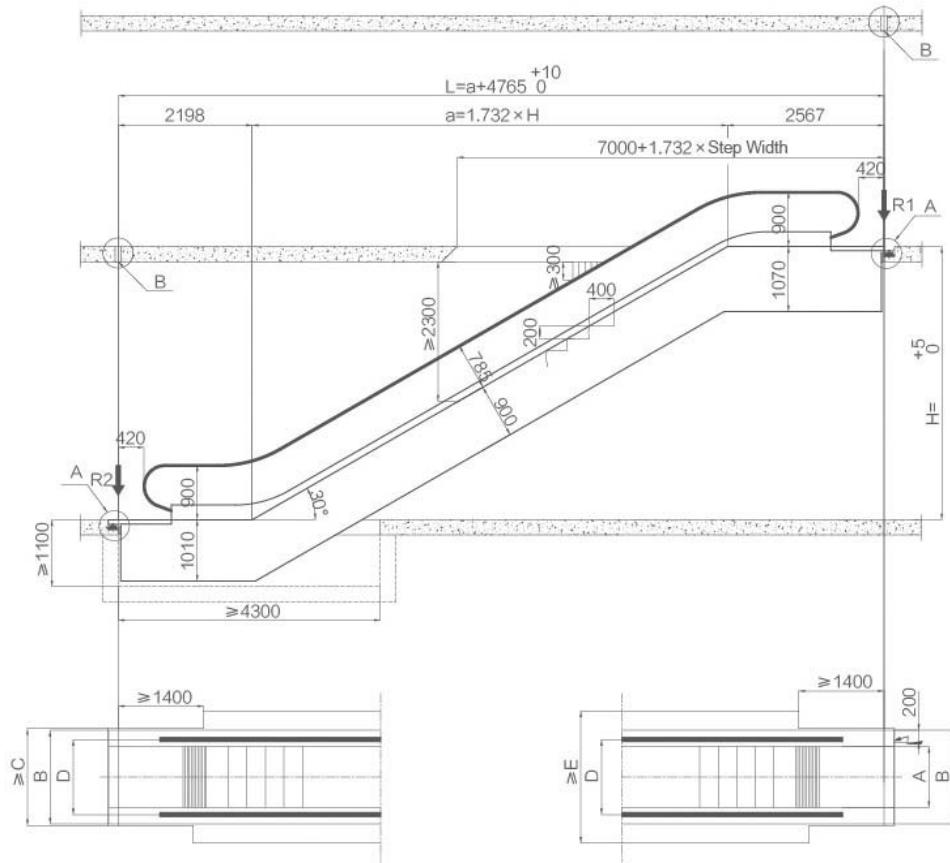

Solutions

XFT Economical Type	
XCM Economical Type	
XDM Conventional Type	
XDF	

Type	Rise Height (m)	Rated Speed (m/s)	Step Width (mm)
XFT (Indoor)	H ≤ 6	0.5	600/800/1000
XCM (Indoor/Outdoor)	H ≤ 7	0.5/0.65	
XDM (Indoor/Outdoor)	H ≤ 7	0.5/0.65	
XDF (Indoor/Outdoor)	H ≤ 10	0.5/0.65
